

# Teradata Physical Database Design

Version 16.10.0

## Module 0 - Course Introduction

Recommended Prerequisite Knowledge .....	0-3
Course Objectives .....	0-4
Course Modules .....	0-5

## Module 1 - Physical Database Design Overview

The Stages of Database Development.....	1-4
Customer Service Logical Model – ERA Methodology Diagram.....	1-6
Different Models, Different Terms .....	1-8
Attributes.....	1-10
Entities and Relationships in the LDM .....	1-12
Normal Forms .....	1-14
Normalization.....	1-16
Database Design Components.....	1-18
Understanding Change Rating .....	1-19
Understanding Access.....	1-20
Extended Logical Data Model .....	1-21
Physical Data Model .....	1-22
The Principles of Index Selection .....	1-24
Module 1: Review Questions.....	1-26

## Module 2 - Building the Database Environment

The Teradata Hierarchy.....	2-4
Owners, Parents, and Children.....	2-6
Creating Objects.....	2-7
Permanent Space Terminology .....	2-8
Spool and Temp Space Terminology.....	2-10
Assigning Space Limits .....	2-12
Module 2: Summary.....	2-14
Module 2: Review Questions.....	2-15
Module 2: Lab Exercises.....	2-17

## Module 3 - Data Distribution and Hashing

Data Distribution .....	3-3
Hashing .....	3-4
Primary Index Hash Mapping.....	3-5
Hash Maps .....	3-6
Primary Hash Map.....	3-8
Hash Maps for Different Systems.....	3-9
Fallback Hash Map .....	3-10
Reconfiguration .....	3-12
MAPS TD 16.10 Reconfiguration .....	3-14
MAPS TD 16.10 Sparse Maps.....	3-16
Hash Related Expressions.....	3-18
Hashing – Numeric Data Types.....	3-22
Multi-Column Hashing.....	3-24
Additional Hash Examples .....	3-26
Using Hash Functions to View Distribution.....	3-28
Row Retrieval via PI Value – Overview .....	3-29
Names and Object IDs .....	3-30
Table ID.....	3-32
Table ID Example.....	3-34
Row ID.....	3-35
AMP File System – Locating a Row via PI.....	3-36
Example of Locating a Row – Master Index.....	3-38
Example of Locating a Row – Cylinder Index .....	3-40
Example of Locating a Row – Data Block .....	3-42
Accessing the Row within the Data Block .....	3-44
General Row Layout.....	3-46
AMP Read I/O Summary.....	3-48
Module 3: Review Questions.....	3-49
Module 3: Lab Exercises .....	3-51

## Module 4 - File System Writes

AMP Write I/O .....	4-3
New Row INSERT – Master Index Access.....	4-4
New Row INSERT – Cylinder Index Access.....	4-5
New Row INSERT – use Free Space within Block .....	4-6
New Row INSERT – Expand the Block.....	4-7
Block and Row Terminology.....	4-10
Block Splits (INSERT and UPDATE) .....	4-12
Cylinder Full.....	4-14
Mini-Cylpack.....	4-16
Space Utilization.....	4-18
1MB Data Blocks .....	4-19
1MB Table Headers (TD14.10).....	4-20
Module 4: Summary .....	4-22

Module 4: Review Questions .....	4-23
----------------------------------	------

## Module 5 - DBS Control Settings

System Level Defaults .....	5-4
DBS Control Record – General Fields .....	5-6
MaxDecimal .....	5-14
Date and Time Parameters .....	5-16
Primary Index Defaults .....	5-18
DBS Control Record – File System Fields .....	5-20
Free Space Percent .....	5-22
MiniCylPackLowCylProd.....	5-23
DefragLowCylProd.....	5-24
PermDBSize.....	5-25
PermDBAllocUnit.....	5-26
JournalDBSize .....	5-27
Cylinders Saved for Perm .....	5-28
Merge Datablocks .....	5-30
Teradata 14.10 – 1MB Spool Rows .....	5-34
DBS Control Record – Performance Fields .....	5-35
DisableSyncScan.....	5-38
ReDistBufSize.....	5-39
Support of Hash Joins .....	5-40
DBS Control Record – Compression .....	5-42
Enabling Compression .....	5-44
Controlling Compression Operations.....	5-45
Temperature Based Block Level Compression.....	5-46
Module 5: Summary.....	5-47

## Module 6 - Analyze Primary Index Criteria

Primary Index Choice Criteria .....	6-4
CREATE TABLE – Indexing Rules .....	6-6
Order of Preference Exercise .....	6-8
Primary Index Characteristics .....	6-10
Multi-Column Primary Indexes .....	6-12
Primary Index Considerations.....	6-14
PKs and Duplicate Rows.....	6-16
Primary Index Demographics .....	6-18
Column Distribution Demographics for a PI Candidate .....	6-20
SQL to View Data Demographics .....	6-22
TableSize View .....	6-24
SQL to View Data Distribution .....	6-25
Module 6: Summary.....	6-26
Module 6: Review Questions.....	6-27
Module 6: Lab Exercises #1.....	6-28

Module 6: Lab Exercises #2 .....	6-32
----------------------------------	------

## Module 7 - Tables without a Primary Index

What is a NoPI Table?.....	7-3
Reasons to Consider Using NoPI Tables.....	7-4
Creating a Table without a PI.....	7-5
Distribution of Rows (or Blocks) for a NoPI Table .....	7-6
The Row ID for a NoPI Table .....	7-8
Loading Data into a NoPI Table (SQL).....	7-10
Loading Data into a NoPI Table (Utility).....	7-12
Archive and Reconfig Issues .....	7-14
NoPI Table Options .....	7-16
Module 7: Summary .....	7-17
Module 7: Review Questions.....	7-18
Module 7: Lab Exercises (optional) .....	7-20

## Module 8 - Secondary Index Usage

Secondary Indexes.....	8-3
Choosing a Secondary Index .....	8-4
Secondary Index Subtables.....	8-6
USI Subtable General Row Layout .....	8-8
USI Hash Mapping .....	8-10
NUSI Subtable General Row Layout .....	8-12
NUSI Hash Mapping .....	8-14
Table Access – A Complete Example .....	8-15
Secondary Index Considerations .....	8-16
Single NUSI Access (Between, Less Than, or Greater Than).....	8-17
Dual NUSI Access.....	8-18
EXPLAIN of ORed NUSI's .....	8-20
NUSI Bit Mapping.....	8-22
EXPLAIN of a SELECT (BMSMS).....	8-24
Value-Ordered NUSIs .....	8-26
Hash-Ordered NUSIs.....	8-30
Hash-Ordered NUSI Example .....	8-31
Covering Indexes .....	8-32
NUSI vs. Full Table Scan (FTS).....	8-36
Accessing Rows.....	8-38
Guidelines for Typical Behaviour .....	8-40
Secondary Index Considerations .....	8-42
Secondary Index Usage .....	8-43
Module 8: Summary .....	8-44
Module 8: Review Questions.....	8-45
Module 8: Lab Exercises .....	8-46

## Module 9 - Partitioned Primary Indexes

Partitioned Primary Indexes (PPI) .....	9-4
Logical Example of Row Partitioning .....	9-6
How is Partitioning Implemented?.....	9-8
PPI Details.....	9-10
Primary Index Access (Non-partitioned Table).....	9-12
Primary Index Access (Row Partitioned Table) .....	9-14
Simple Partitioning Example .....	9-16
Partitioning with CASE_N and RANGE_N .....	9-17
Partitioning with RANGE_N – Example.....	9-18
Access Using Partitioned Data – Example .....	9-20
Access Using Primary Index – Example.....	9-22
Place a USI on NUPI – Example .....	9-24
Place a NUSI on NUPI – Example .....	9-26
Partitioning – Example.....	9-28
Partitioning with RANGE_N – Example.....	9-30
Special Partitions with CASE_N and RANGE_N.....	9-32
NO CASE (NO RANGE) or UNKNOWN .....	9-34
Character PPI – Example .....	9-36
TIMESTAMP PPI.....	9-40
SQL Use of PARTITION Key Word.....	9-42
SQL Use of CASE_N .....	9-44
Using ALTER TABLE with Row Partitioned Tables .....	9-46
ALTER TABLE – Populated Tables .....	9-48
ALTER TABLE – NO RANGE is not Defined.....	9-50
ALTER TABLE – NO RANGE is Defined.....	9-52
ALTER TABLE – WITH DELETE Example .....	9-54
ALTER TABLE – DROP/ADD Example .....	9-56
ADD Clause on Partitioning Expression .....	9-58
ALTER TABLE TO CURRENT – Example.....	9-59
EXPLAIN Terminology for PPI Tables.....	9-62
Example 6 – Partition Elimination with a PPI Table.....	9-64
Multilevel Partitioning Concepts .....	9-66
ADD Partitions Option – Example .....	9-68
Multilevel Partitioning – Example.....	9-70
How is the MLPPI Partition # Calculated? .....	9-72
Module 9: Summary.....	9-73
Module 9: Review Questions.....	9-74
Module 9: Lab Exercises.....	9-76

## Module 10 - Compression Forms

Teradata Data Types .....	10-4
Character Sets .....	10-6
Table Headers .....	10-8
Presence Bits.....	10-10
Multi-value Compression .....	10-12
Presence Bits and Compression Example.....	10-14
Implementing Multi-value Compression.....	10-16
ALTER TABLE and Compression.....	10-18
Multi-value Compression Considerations .....	10-20
Algorithmic Compression Example .....	10-22
Block Level Compression Options.....	10-24
Temperature-Based Block Level Compression .....	10-25
Defining Temperature Data .....	10-26
Advantages of Temperature-Based Compression .....	10-27
BLC Groups.....	10-28
DDL Compression Options .....	10-29
Compression Capabilities .....	10-30
SQL Interface for FERRET .....	10-32
DBC.CreateFsysInfotable – SHOWBLOCKS .....	10-34
DBC.PopulateFsysInfotable – SHOWBLOCKS.....	10-35
SHOWBLOCKS (Short) Output Example .....	10-36
DBC MACROS with SHOWWHERE .....	10-38
DBC.PopulateFsysInfoTable Content Example .....	10-40
Module 10: Summary .....	10-42
Module 10: Review Questions.....	10-43
Module 10: Lab Exercises .....	10-44

## Module 11 - Access Considerations and Constraints

Access Method Comparison .....	11-4
Optimizer Access Scenarios .....	11-6
Partial Value Searches .....	11-7
Storing Numeric Data .....	11-8
Data Conversions.....	11-10
Data Conversion Example .....	11-12
Matching Data Types.....	11-13
Counting I/O Operations.....	11-14
Transient Journal I/O .....	11-16
Table Level Attributes .....	11-18
Column Level Constraints .....	11-20
Table Level Constraints.....	11-22
Example of Column and Table Level Constraints.....	11-24
Example – SHOW Department Table .....	11-26
Altering Table Constraints.....	11-30
Module 11: Summary .....	11-32

Module 11: Review Questions.....	11-33
Module 11: Lab Exercises.....	11-34

## Module 12 - Referential Integrity

Referential Integrity Overview .....	12-4
Parent-Child Relationships .....	12-6
Three Types of Referential Constraints .....	12-8
Processing Cost of Referential Constraints.....	12-10
Fixing Referential Integrity Problems.....	12-12
Standard Referential Integrity .....	12-14
Batch Referential Integrity.....	12-16
Soft Referential Integrity.....	12-20
Referential Integrity Example .....	12-22
Join Optimization with RI.....	12-24
Module 12: Summary.....	12-26
Module 12: Review Questions.....	12-28
Module 12: Lab Exercises.....	12-29

## Module 13 - Optimizer and Collecting Statistics

Teradata Optimizer.....	13-3
Optimizer – Cost Based vs. Rule Based .....	13-4
Optimizer Statistics .....	13-6
Optimizer’s Search for Statistics.....	13-8
Optimizer – Dynamic AMP Samples.....	13-10
Optional Adjustments for Dynamic AMP Samples .....	13-12
Dynamic AMP Sampling – How it Works .....	13-14
Optimizer Estimate without Collected Statistics – Example .....	13-16
Statistics .....	13-18
Statistics Data – What is Collected? .....	13-20
COLLECT STATISTICS Command.....	13-22
Collecting Statistics.....	13-24
Refresh or Re-Collect Statistics .....	13-26
COLLECT STATISTICS Command (Index Format with 14.0 Options).....	13-28
COLLECT STATISTICS on a Data Sample .....	13-30
Collecting Statistics – 14.0 Examples.....	13-32
Viewing Statistics .....	13-34
Optimizer’s Use of Statistics with Uneven NUSI.....	13-36
Collecting Statistics on PARTITION.....	13-38
Copying STATISTICS.....	13-40
Statistics Extrapolation.....	13-42
Additional Statistics Options .....	13-44
Teradata 14.0 Enhancements .....	13-46
Teradata 14.10 Enhancements .....	13-48
Teradata 14.10 Re-Collect Enhancements .....	13-50

COLLECT STATS Using THRESHOLD Options .....	13-52
Teradata 14.10 AutoStats.....	13-54
Stats Manager .....	13-55
Module 13: Summary .....	13-56
Module 13: Review Questions.....	13-58
Module 13: Lab Exercises .....	13-59

## Module 14 - Join Processing Analysis

Join Types vs. Join Strategies .....	14-3
Product Join .....	14-4
Product Join Explain.....	14-5
Product Joins.....	14-6
Merge Join with Duplication and Sorting.....	14-7
Merge Join Strategy.....	14-8
Merge Join with Row Redistribution.....	14-9
Merge Join with Redistribution Explain.....	14-10
Merge Join with Matching Primary Indexes .....	14-11
Merge Join on Matching Primary Indexes Explain .....	14-12
Alternative to Using OR Join Conditions.....	14-13
Exclusion Joins .....	14-14
Exclusion Join Example .....	14-15
Exclusion Merge Join Explain.....	14-16
Inclusion Merge Join Explain.....	14-17
Hash Joins.....	14-18
n-Table Joins.....	14-22
Three-Table Join Explain .....	14-23
Partial Redistribution and Partial Duplication (PRPD) .....	14-24
PRPD Join Steps Simplified .....	14-26
14.10 EXPLAIN Terminology & Modifiers .....	14-28
Nested Joins .....	14-30
Nested Join Explain.....	14-31
Join Considerations with Partitioned Tables .....	14-32
NPPI to PPI Join – Many Partitions .....	14-34
NPPI to PPI Join – Sliding Window.....	14-36
NPPI to PPI Join – Hash Ordered Spool File Join.....	14-39
PPI to PPI Join – Rowkey-Based Join.....	14-40
PPI to PPI Join – Unmatched Partitions .....	14-42
Join Processing Observations .....	14-44
Index Choice Guidelines.....	14-46
Module 14: Summary .....	14-48
Module 14: Review Questions.....	14-50
Module 14: Lab Exercises .....	14-52

Appendix A: Review Question Solutions

Appendix B: Lab Exercise Solutions
